

Telesat LEO

TRANSFORMING
GLOBAL COMMUNICATIONS

TELESATTM

The Telesat LEO Network

Telesat has developed a highly innovative global network composed of about 300 state-of-the-art Low Earth Orbit (LEO) satellites, seamlessly integrated with on-ground data networks

The Telesat LEO Network incorporates next-generation technology including:

Data Processing in Space: Full digital modulation, demodulation, and data routing occurs in space, resulting in higher capacity and flexibility

Phased Array Antennas: Sophisticated antennas on each satellite with hopping beams scan the earth to provide full coverage and can dynamically focus capacity precisely where users require it

Optical Inter-satellite Links: Data can travel at the speed of light from one satellite to another, resulting in a fully interconnected global mesh network that allows customers to access the Telesat LEO Network no matter where they are

Hybrid orbits: Satellites in an industry-first combination of polar and inclined orbits, resulting in complete global coverage, including polar areas, with higher capacity where most of the world's population lives

Unsurpassed performance at transformative economics

High Throughput:

Gigabits per second speeds to a remote, and multiple Tbps of capacity in the network ensures enterprise-grade connectivity for unconstrained video streaming, video conferencing and file transfers.

Low Latency:

The Telesat LEO Network is about 20-times more responsive than today's geosynchronous satellites and on par with fiber networks. Service providers can be confident that encrypted web pages and enterprise cloud applications will work seamlessly.

Global Coverage:

Every point on Earth is covered, including polar regions.

High Capacity for Hotspots:

Our intelligent network can dynamically allocate bandwidth to areas with high traffic demand such as large communities or airport hubs.

Always On:

Highly resilient network with multiple interconnected satellites and multiple ground nodes without any single point of failure ensures networks always stay connected.

Quick Service Deployment:

Compliant with Metro Ethernet Forum (MEF) standards for seamless plug and play integration.

Telesat LEO

Verified Performance

Telesat has conducted several testing campaigns with leading maritime, aero and enterprise service providers, demonstrating industry-leading high throughput and quality. Learn more at <https://www.telesat.com>.

Telesat LEO, launching in 2022, will be available through leading connectivity service providers.
