

TELESAT
LIGHTSPEED™

City-quality connectivity everywhere

TELESAT™

An aerial photograph of a coastal town, likely Lofoten in Norway, during winter. The town is built on a peninsula with a harbor filled with numerous colorful fishing boats. The houses are painted in various colors like red, yellow, and white, with snow on their roofs. In the background, there are large, rugged mountains covered in snow, with some peaks catching the golden light of the sun. The sky is a clear, pale blue.

TELESAT **LIGHTSPEED™**

A ubiquitous transport alternative that delivers wireline quality and wireless flexibility – at disruptive economics

Telesat Lightspeed incorporates next-generation technology including:

Data Processing in Space

Full digital modulation, demodulation, and data routing occurs in space for processing, resulting in higher capacity and flexibility.

Optical Inter-satellite Links

Data can travel at the speed of light from one satellite to another, resulting in a fully interconnected global mesh network that allows customers to access the Telesat Lightspeed network no matter where they are.

Phased Array Antennas

Sophisticated antennas on each satellite with hopping beams can dynamically focus capacity precisely where users require it.

Hybrid orbits

Satellites fly in a combination of polar and inclined orbits, resulting in complete global coverage, including polar areas, with higher capacity where most of the world's population lives.

Telesat has developed a highly innovative global network composed of 188 state-of-the-art Low Earth Orbit (LEO) satellites seamlessly integrated with on-ground data networks.

Backhaul connectivity re-imagined

Unlock Revenue Pools

Increase revenue by selling more services and lower churn rates with enhanced network performance. Bring in new connectivity to unserved areas or expand coverage of 4G/5G networks.

High Performance with Low Latency

20-times more responsive than today's satellites for better voice, video streaming and security that matches fibre connectivity.

Always On

Highly resilient network with multiple interconnected satellites and ground nodes without any single point of failure ensures your customers always stay connected.

Quick Service Deployment

MEF 3.0 standards compliance provides seamless plug-and-play integration with the ability to rapidly set up connectivity anywhere, anytime.

Global, Scalable

Every point on Earth is covered, with Gigabits per second speeds to a remote and multiple Tbps of capacity in the network to deliver enterprise-grade connectivity.

Telesat has conducted several testing campaigns with leading mobile network operators, including the world's first 5G testing over LEO.

Telesat Lightspeed services will be available through leading connectivity service providers. To learn more, visit www.telesat.com/lightspeed
